

A VOITHOS360 FRAMEWORK

Does your model cover all 5 Rights?

The 5 Rights of Care Execution™

Built on a clinical discipline: getting care right means aligning the patient, problem, timing, action, and person.

Right Patient

Who is showing evidence that intended care may not be completed?

Right Problem

What is getting in the way: understanding, access, cost, scheduling, or coordination?

Right Time

When can intervention still change the care trajectory?

Right Intervention

What action addresses this patient's specific barrier?

Right Person

Who is best positioned to act: patient, caregiver, provider, or care team?

For each right, ask: What evidence do we have? What is missing? Who owns the next step?
