

The 5 Rights of Care Execution™

Built on a clinical discipline: getting care right means aligning the patient, problem, timing, action, and person.

Does your care model know who needs help, why, and when action can still matter?

1

Right Patient

Who is showing evidence that intended care may not be completed?

2

Right Problem

What is getting in the way: understanding, access, cost, scheduling, or coordination?

3

Right Time

When can intervention still change the care trajectory?

4

Right Intervention

What action addresses this patient's specific barrier?

5

Right Person

Who is best positioned to act: patient, caregiver, provider, or care team?

SEE | UNDERSTAND | ACT | EARLIER

Make intended care visible while there is still an opportunity to act.

Connect the experience. Focus the intervention.

PATIENT + CAREGIVER

Can I understand the next step and get it done?

PROVIDER

Is the care I intended actually happening?

CARE TEAM

Who needs help, what will help, and who should act?

PAYER / ACO

Where could earlier action change outcomes and cost?

V360 connects longitudinal evidence of clinical intent, progress, and barriers to help teams recognize unresolved care and consider earlier action.

What does getting the 5 Rights wrong cost?

\$674,125

modeled net annual savings
Illustrative base case; 100,000 lives

75,000 eligible episodes → 11,250 delays
6,750 early signals → 4,725 reached
945 resolved delays → \$945,000 gross value
Less \$270,875 total program cost

Base assumptions: 0.75 episodes/member/year; 15% delayed; 60% detectable early; 70% reached; 20% resolved; \$1,000 avoided cost/resolution; \$15/reached episode; \$200,000 annual fixed cost.

Scenario estimates, not demonstrated savings. All drivers require partner validation. The conservative scenario yields a \$175,000 net annual loss. Earlier detection alone does not establish intervention benefit.

How does your care model perform against the 5 Rights?

ACOs, risk-bearing providers, health plans, and navigation organizations: evaluate one pathway through a governed data partnership or focused paid pilot.
